SECURITY REDEFINED

VALUES YOUR SECURITY

G-Force essentially believes in transparency, discipline, honesty and professionalism. Based on these values G-Force is standing firmly in its foundations and leading its way. The word G-Force is derived from Gorkha Force which is renowned in the world for its bravery, integrity and honesty. G-Force believing truly in these factors, have built its foundation on the same values. In fact, these are the things that are embedded deeply in our behavior and working culture. G-Force has developed and groomed itself to redefine the outlook which portrays gorkhali's not just as fighters but also as skilled technicians, doctors, engineers and other working professionals in various fields. In business, human resources are the greatest asset, so our group is dedicated to share our knowledge, expertise and resources so that it can be acknowledged that our group has to best way to respond to various problems. We care about people and the role of work in their lives. We respect people as individuals, trusting them, supporting them and enabling them to achieve their aims in work and in life. We help people develop their careers through planning, work, coaching and training with participatory approach.

At G-FORCE We Truly Value your Security

Established in the year 2006, G-Force Security Pvt. Ltd. continues to provide complete security related services. It is managed by dedicated team of Ex- Army officers to provide competent security solutions round the clock. G-Force Security Maintains high profile clients including premier financial institutions, Commercial Banks, Telecommunications, Hospitals, Schools and many more. G-Force Security has integrated Security services with Technology to provide more efficient, reliable and complete security solutions.

Services Provided :

- Security Services
- Perimeter Intrusion Detection System
- Central Monitoring Station (CMS)
- Video Management System (VMS)
- Building Management System (BMS)
- Active Guard Patrol with Sensor
- Night vision hand held Camera
- Integrated Security Services
- Digital Lock with GPS/GSM
- RAPID FOG

Perimeter Intrusion Detection System

Perimeter Intrusion detection system (PIDS) is an integrated system comprising of components like active fence shock sensors, cable sensors, microwave barrier, laser detectors, infrared sensors and video analytic.

Long range wireless active infrared barrier

INFRARED

SOLARIS

- » 100m range wireless active infrared barrier
- » Without civil works
- » From 6 to 20 beams from 1 m to 3 m in

Special Design

Anti-condensation and anti-ice caps:
 These caps prevent the presence of condensation and ice on the infrared cover allowing for correct functioning in all weathers up to 100m range.

SHOCK DETECTION

G-FENCE 3000

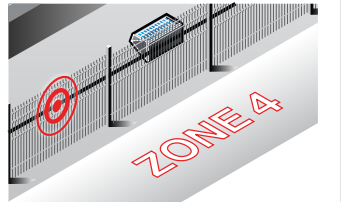

- Integrated solar panel
- Intrusion detection algorithms
- Up to 200 m of protection per Control Unit
- 2 auxiliary inputs per Control Unit for external alarms

G-FENCE detects all attempts to cut, to climb and to pull out the fence on which it is installed. It ignores fence disturbances caused by meteorological phenomenon (rain, wind) or vibrations caused by vehicles

Control units are resistant to extreme atmospheric conditions and environments with high electro-magnetic interference.

- New generation of cable
- New algorithms
- New functionality with the Maxibus 3000
- Precise localization to 3 m
- Up to 4x3200 m of protection per system

Intrusion Localization

P ▲ R ▲ D O X™

Security

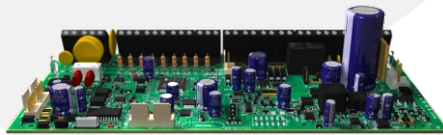

- State of Art Intrusion Detection System.
- App Based Control System
- Wireless Technology
- Controlled by Single EVO192 Unit

Keypads

App-based System Control

EVO

Wireless Technology

Access Control

	EVO192
Zones	192
Users	999
Partitions	8
Access Control	32 doors
Expansion Modules	254

Multipath Communication

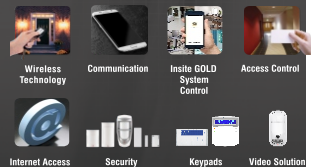

P ▲ R ▲ D O X™

High-Security & Access System

EVO

TM70 Touch Intuitive Touchscreen

Sentinel Ultra

- Identification up to 100m
- Integral recording – Footage easily download via USB port
 - Back light and illumination adjustment
 - Lightweight
 - Hand-held
 - Simple to use
 - On / off switch
- Includes docking station for charging and belt pouch
 - Ideal for Security, Search & Rescue and Protection
 - 10-100m Focus

ACTIVE GUARD

Active Guard is the most advanced, **first of its kind in the world**, system for monitoring the time, place and results of the work of personnel. By combining benefits of GPRS communication and RFID reading Active Guard can be used as a **guard tour system**, a **personnel protection system** and a **voice communications device**. **Active Guard ensures the ability to react immediately**, which helps increase the safety and quality of work. It gives instant irregularity warning.

NEW, BETTER FUNCTIONALITY AND DESIGN

Built-in accelerometer

- Man-down detection notification about life-threatening of the user life threat
- Excessive shock detection notification about attempt destroying the device
- Tilt detection with configurable positions and angles notification about changing the position of device alarm signal if the position is outside the defined range

Form optymalization

- More comfortable in use and more durable

Silicone gasket

- Silicone gasket placed in special grooves in the housing - for better durability and tightness

More screws

- Better distribution of forces at the fall

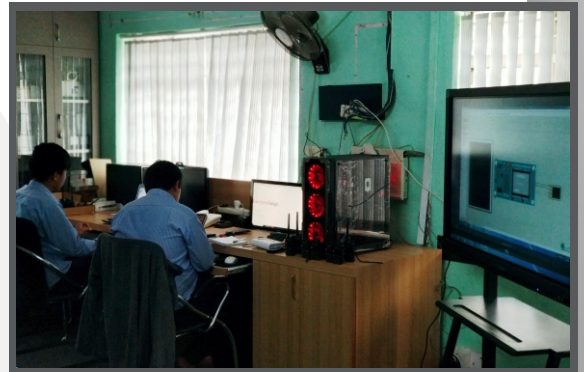

VIDEO MANAGEMENT SYSTEM (VMS)

Video management system (VMS) is video console that communicates, coordinates and captures with the intrusion video monitors and cameras installed and provide live interface which are highly customizable with DVR / NVRs. The system effectively monitors intrusion zones with motion sensor based cameras and immediately relays depending upon the zone customization which can significantly reduced data recordings.

CENTRAL MONITORING STATION

Central Monitoring station controls, coordinates and communicates information shared, provided and produced by security systems, equipments and personnel. Events captured by security systems are closely analyzed by Central Monitoring Station manned 24 x 7. The information captured which are sensitive in nature are protected and passed to concerned authority. Close Monitoring of security assets installed in different locations are monitored simulatenously.

RAPID FOG

Rapid Fog is high speed fogging system that instantly reduces visibility by fogging up the area to prevent loss of valuable assets. It can be combined with motion sensors, alarms or video analytics.

Rapid Fog is one of the most effective prevention system for instant burglary, robbery and break-in. It defeats the intrusion instantly and immediately.

SMART LOCK WITH GPS/ GSM SYSTEM

Smart tracker lock is suitable for container safety, container logistics tracking management, asset remote control, is an innovative container security and tracking products, using GPRS, GPS, new technology mobile phone Bluetooth, static and dynamic password unlock, providing cloud Platform + hardware + sensor Integration Services to cargo transport companies, customs import and export, large-scale cargo companies.

GPS positioning, GSM positioning.

Remote password unlock instruction via platform or SMS. Through the mobile phone Bluetooth app to send the scene password unlock instructions.

support static password and dynamic password, static password is valid for a long time, the dynamic password uses once after expiration.

The lock outside the fence, can only be unlocked within the designated surrounding, through configuration tools and platform instructions configuration.

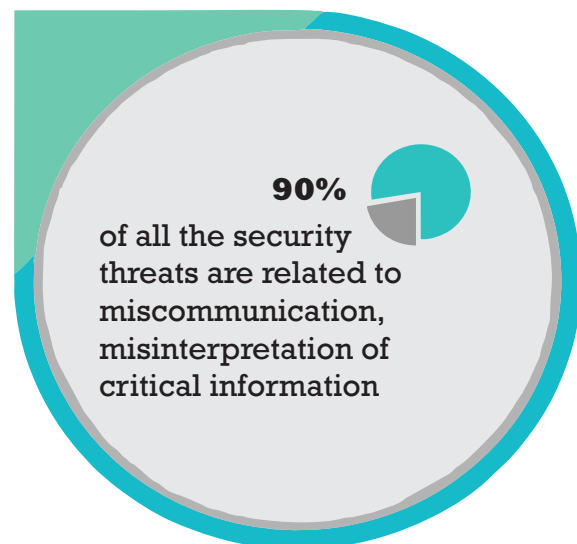

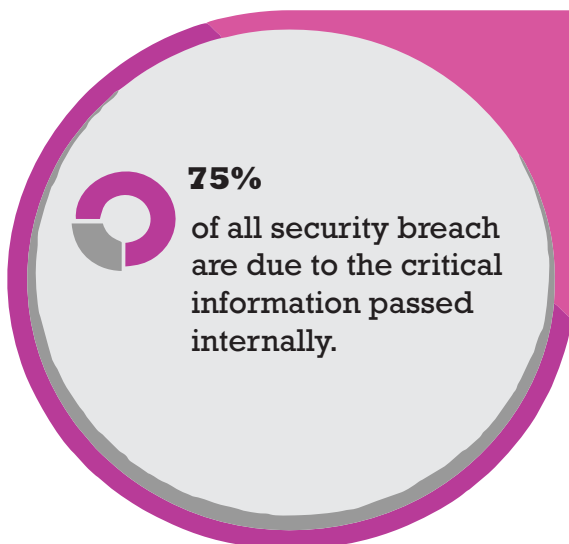

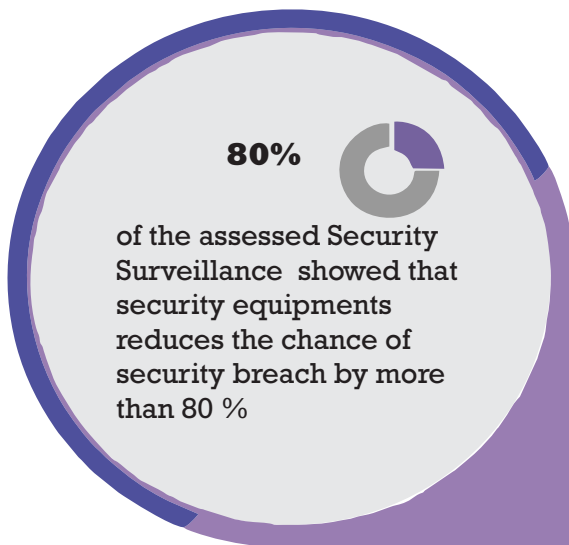

Terminal and driver vehicle information binding, through configuration tools and platforms and mobile phone bluetooth app command configuration.

Alarm for illegal unlock

Strong-type grip structure design, the lock can not be easily destroyed.

HAVE YOU DONE YOUR SECURITY ASSESSMENT ?

WHY TO DO SECURITY ASSESSMENT

- Provides your Critical Information regarding the security Gaps
- Assessment of the potential threat areas from which security can be compromised
- Your Overall Security Status
- Gives you overview of your Security control of any area
- Reconcile your current controls regarding security risks
- Identify and Quantify risks to your information assets
- Understanding the Strength and Weakness of your security status
- Comprehensive Understanding of Potential integration of security equipments.
